High Profile Green Solutions Tells Mosquitoes to “BUZZ” Off with 100% Edible Organic Spray

*Organic Lawn Care Company Offers Non-Chemical Mosquito Control Along with
Education for Cultural Control and Prevention of Mosquito Infestation*

Minneapolis, MN – June 8, 2016- There is nothing worse than planning an outdoor event and unwanted guests arrive; especially when all they do is suck you dry. Mosquitoes have nasty habits of buzzing around; causing itchy bites and transmitting disease such as the Zika virus.

John Kalan the founder of HPGS states that “To ensure the safety of family, friends and pets it’s extremely important to make sure you are taking the proper steps in control.” HPGS works hard to educate its customers on the proper steps to reduce mosquito breeding through water management and source reduction, and second spraying to repel adult populations.

Enjoy the outdoors this summer and help stop the spread of mosquito/tick-borne illnesses by following these tips from High Profile Green Solutions (HPGS) to prevent mosquito infestation and to gain control of an existing problem.

- 1.) Since many mosquitoes breed in standing water, source reduction can be as simple as emptying water from containers around the home. This is something that homeowners can accomplish. For example, homeowners can eliminate mosquito breeding grounds by removing unused plastic pools, old tires, or buckets; by clearing clogged gutters and repairing leaks around faucets; by regularly (at least every 4 days) changing water in bird baths; and by filling or draining puddles, swampy areas, and tree stumps. Eliminating such mosquito breeding areas can be an extremely effective and permanent way to reduce mosquito populations without resorting to insecticides. [Wikipedia 2016] “Remember to irrigate lawns and gardens carefully to prevent water from standing for several days,” added Cook.
- 2.) Subscribe to monthly treatments of “Skeeter Beater” to discourage mosquitoes from invading your back yard and establishing a breeding ground.

HPGS offers a proprietary product specially formulated and marketed as “Skeeter Beater”. This product is comprised of 99.3% Garlic Juice, .5% Citric Acid and .2% Potassium Sorbate. This product is applied as a mist to ensure complete coverage to all target foliage.

“Over the last year we have seen increased cases of mosquito/tick-borne illnesses such as the West Nile virus, Lyme Disease, Encephalitis and now to include the possible dangers of other exotic diseases like the Zika virus.”, says Eric Cook *Division Manager at HPGS*.
