All Natural Lawn Fertilizer: So Safe, You Could Kiss Our Grass!

In direct response to the rise in instances of harmful effects of pesticides in kids and dogs, High Profile Green Solutions began using completely edible and all natural lawn fertilizers.

Minneapolis – March 2019: In 2016, Minneapolis-based High Profile Grounds Maintenance, Inc. decided to go GREEN and began offering 100 % All-Natural lawn fertilizer programs. The new High Profile Green Solutions division is dedicated to selling and applying lawn fertilizer products that will not harm the environment or non-intended targets. Their all natural lawn fertilizer formula is made from completely edible ingredients (made from beet by-products) and have proven safe for animal consumption.

Many people don't realize the potential harm in exposing their family members to environmental toxins such as the chemicals contained in herbicides. When kids or dogs are exposed to a pesticide, the chemical residue collects on their feet, skin and coat. It is then tracked indoors, deposited on multiple surfaces throughout the home and can contaminate the entire family.

A recent study conducted by the Quebec Institute of Public Health found that 98.7 percent of dogs exposed to pesticides had residual chemicals in their urine. These chemicals are known to increase the risk of cancer and other fatal diseases by as much as 70 percent. Unfortunately, it can be quite difficult for people to avoid applying pesticides to their lawn with such a lack of all-natural options on the market.

"This study brings up the obvious question - what is the acceptable level of pesticides in your pet's body?" explained Kim Kalan, the Director of Sales at High Profile Grounds Maintenance. "We believe the answer is none. We are proud to provide a wide range of all-natural lawn care services and products that are able to create lush, green grass without resorting to traditional EPA-registered chemicals."

About High Profile Green Solutions:

For the past 26 years, High Profile Grounds Maintenance, Inc. has served as one of the best grounds care providers in the greater-Minneapolis area. Since launching their Green Division in 2016, the company has made an unprecedented name for themselves within the industry. They are proud to offer a number of all-natural services including: 100% edible fertilizers, all-natural weed control, all-natural pest control, beneficial pest gardens, doggy pee spot treatments and edible landscaping.
